## EVOLUX LASER CLEANING MACHINES

Evolux is the innovative concept for cleaning and analytical control of anilox, designed and developed by Ulmex to become an integral part of your production printing processes.

Evolux technology allows you to carry out powerful cleaning on all types of anilox sleeves and rollers, whether ceramic or chrome. Cleaning time is significantly reduced. Residues are removed homogeneously and durably, without the

use of chemicals.

Evolux is the premium machine for the laser-cleaning concept, characterized by advanced technology

and versatility, providing maximum reliability and efficiency, even with

intensive use. There are several models available in the Evolux line, including the basic Compact Machine Model and the portable Mobile Smart Laser Cleaning Machine.

how and expertise shared with long-time partner Zecher, world leader in the production of ceramic and chrome anilox.

Ulmex engineered the entire Evolux range to clean, while preserving the integrity of the anilox surface, thanks to the consolidated know-

In addition to cleaning, Evolux also provides continuous and accurate control of your anilox inventory with an overview for preventative maintenance, reducing regeneration costs thanks to the integrated 3D microscope and exclusive, proprietary software, D.A.M. Dynamic Anilox Management.
